Copernicus

THE BIG DATA CHALLENGE

- **Massive amounts of data**
- **Full, open and free-of-charge**
- **Ease of access and use**

**Over 10 Petabyte/year
of new data**

with just Sentinels-1, -2
and -3 fully operational
(data are downloaded
many times over)

- Different types of **dissemination** infrastructures
- Member States Collaborative GS
- **New technology** developments
- ICT and EO **cross-fertilisation**
- **Interoperability** with non-EO datasets
- Public programmes as enablers
- Growth and jobs in **downstream** sector

What are the goals

- Give to the users the means to access and use unprecedented amount of quality EO data and information
- Mutualising common parts of infrastructure needed by users in particular Member States
- **Open environment – non-discriminatory**
- Serving better all types of users, expand the user base, promote interaction between communities : public authorities, research, industry, EO/non-EO
- Enabling businesses by lowering barriers and costs to set up EO business
- Building ecosystem of service providers and users, support opening up new markets
- Promote European initiatives in EO
- Competition to stimulate innovation and offer choices

Copernicus

Concept building process

- Request from Copernicus Committee/User Forum
- Discussions at EU, ESA & EUMETSAT (Copernicus Committee, IGS Task Force, PB-EO) in 2015/2016
- EU Space Strategy Communication, ESA Ministerial Council, EUMETSAT Council
- Consultation with industry (e.g. Value Chain Workshop in April 2016, Brussels; Workshop on EO exploitation Platforms October 2016, ESRIIN)...
- **Defined through common work during 2015/2016**

Overview Distribution and DIAS

Copernicus

General requirements for DIAS

- Access to Copernicus data and information virtually collocated with computing resources
- Operational in terms of reliability, robustness, performance
- Complement traditional distribution system
- Promote projects evolution from research to business without changing exploitation environment

Copernicus

DIAS Data Offer requirements

- All data accessible (but not necessarily all locally available), including Sentinels + Services information
- A significant data offer (Copernicus + third party)
- Free, full and open access to the Copernicus data and information

Copernicus

D I A S s e r v i c e s r e q u i r e m e n t s

- Non-discriminatory access and use
- Include processing services, viewing, discovery & download
- Data fusion (Copernicus data and information with non-EO data)
- Exploitation of big data analytics tools (intelligence rather than bandwidth)
- Interoperability features (Data/Services)

Copernicus

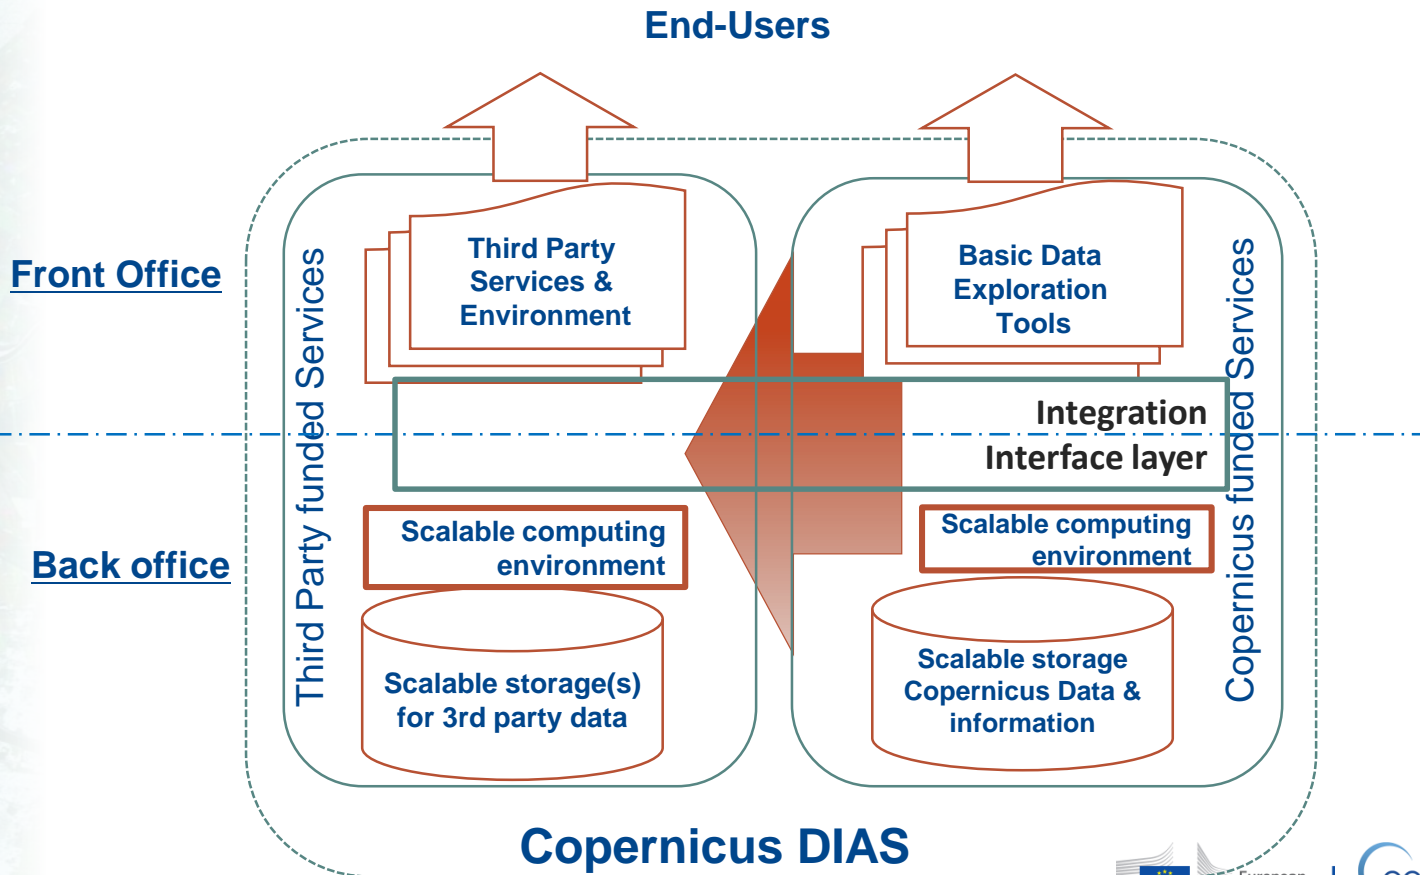

DIAS requirements to enable Third party use

- Offers storage and processing under commercial conditions
- Providers/third party may offer additional data, tools and services
- Protection of data and IPR, different licences (management, free, paid, ...) IPR belongs to the creators
- Provide development environment solutions for applications building. Chaining of services/software/API/etc
- Third parties can offer their front office services on top of DIAS back office.
- Trusting third parties to propose innovative services to non-expert users

Copernicus

DATA & INFORMATION ACCESS SERVICES

DIAS overview

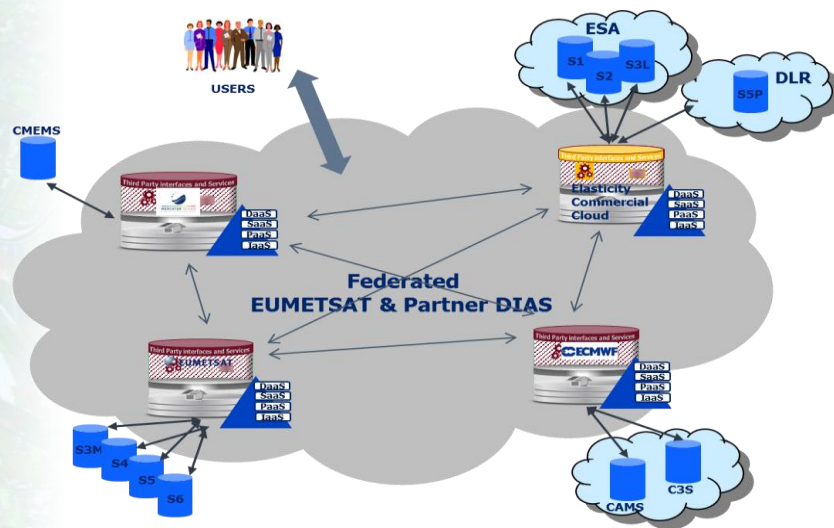

..up to 4 DIAS Providers (consortia)

- ESA
 - Industry Information day: December 2016
 - Procurement initiated in January 2017
 - Offers received in April 2017
 - Evaluation for June 2017
 - Procurement authorised by COM in July 2017
 - Negotiation on-going
 - Signature in 2017
 - Initial operations Q2 / 2018
- Announcement event: Q1/Q2 2018

Copernicus

DATA & INFORMATION ACCESS SERVICES

- EUMETSAT

- Work on DIAS v0 on-going
- Operations v0 starts Q2/2018 for beta tester
- Public operations end of Q2/2018
- DIAS Industry Day January 2018 for v1,v2,v3
- Procurements v1,2,3 starting in Q1/2018
- v1 operations Q4/2018,
- v2,v3 released on a 9 month schedule

European
Commission

Copernicus

Third-party service provision

Chaining of value adding services between Third Parties is a key feature for a dynamic market ecosystem

DIAS Provider

European
Commission

Europe's eyes on Earth

Multiple DIAS & Interoperability scenario

Copernicus

1 – MULTIPLE DIAS

Third Party Service providers may choose between commercial IT offers and from possibly multiple DIAS service providers

DIAS Provider (1)

2 – INTEROPERABILITY

Interfaces enabling cross-operations (open API) between multiple DIAS and between DIAS and “other environments”.
Third Party Service providers may integrate data/information from “other environment” in their service provision .

DIAS Provider (2)

3 – EXTERNAL RESOURCES

Third Party may provide services based on Copernicus data on “other environments”

European
Commission

Copernicus

Complementarity with other public initiatives

- COM H2020
 - DG/GROW, RTD and CNECT
 - EOSC
- ESA Programmes
 - TEPs
 - Toolboxes
 - Development initiatives
 -
- EUMETSAT Pathfinders
- ECMWF initiatives
- National initiatives
 - Collaborative Ground Segments
 - ...

Copernicus

Conclusions and timeline

- ❖ Long lasting and sustainable exploitation services
- ❖ In coordination with other initiatives (ESA, EUMETSAT, H2020, EOSC)
- ❖ Implementation through ESA and EUMETSAT according to the same functional specifications document
- ❖ All DIAS to be generic, freedom for third parties to act.
- ❖ Business are expected to provide services through DIAS
- ❖ Operational by Q2 2018
- ❖ Increase data offer over the following 12 months
